

## Hydro-Safe® Water Filtration Systems

The new Hydro-Safe® filtration system's 3-in-1 design is engineered to provide superior performance in a convenient package. The rugged construction combined with Ultra-Violet light, micro-filtration and activated carbon make an excellent filtration system for the home or office at an affordable price.

### With 3-In-1 Technologies For Superior Performance

Water is filtered through our 0.2micron filter media, which is pleated and efficient enough to remove cyst sized particles.

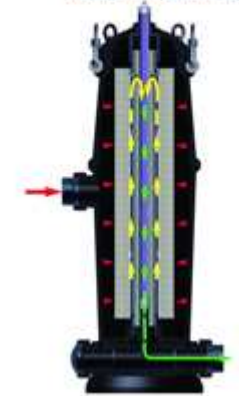

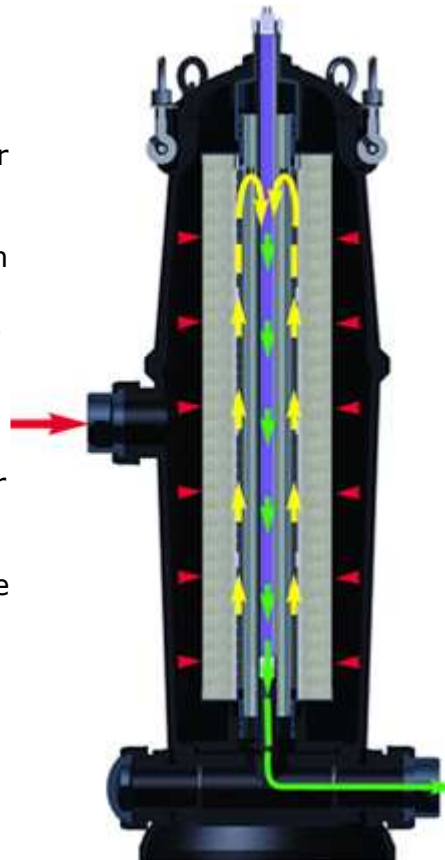

At the same time, the water is exposed to powdered activated carbon--which is part of the media--to reduce chlorine, taste, and odors.

Finally, water is exposed to a 254 nm UV lamp, inside a stainless steel chamber for disinfection without chemicals.

### Features

More Information

### Product Brochure

### Affordable

- Unlike other units on the market, Hydro-Safe® Water Filtration Systems are affordable for average consumers. For pricing call our distributor or dealer today!

### Rugged construction

- Hydro-Safe® filter vessels are made from rugged, glass-reinforced polypropylene so they will not chip, rust or dent. The lid closure is safe and secure, using stainless steel swing bolts for optimum safety. Filter vessels are rated for pressure up to 125psi.

### Performance

- 0.2 micron depth filtration, capable of trapping sediment and cyst sized particles.
- Activated carbon to reduce taste, odors, and chlorine.
- 254 nm ultra violet light to sterilize bacteria & virus.
- Lamps rated for 12 months of continuous service. (30 mj/cm2 at 10 GPM service flow.)

### Applications

#### *Hydro-Safe® Components*

- Whole house filtration
- Drinking water systems
- Beverages
- Food service

- Office buildings
- Campgrounds
- Mobile home parks
- Community systems
- Yachts & ship building
- Misters
- And more
